

# Lightening Serum

## Depigmenting Serum

### Lightening Line

Depigmenting Serum contains complementing active ingredients that normalise the melanin production preventing and fading hyper-pigmented spots.

**Size:** Retail 25 mL

## About

### Key Ingredients

#### *Citrus flavonoids.*

*In liposomal form, which facilitates their absorption.*

Inhibit the tyrosinase enzyme, which contributes to the reduction and normalization of the melanin production.

#### *Ascophylum nodosum.*

Improves skin natural exfoliation and cellular renewal.

Inhibits melanin synthesis by preventing the triggering of the melanogenesis and by inhibiting tyrosinase activity.

#### *Diacetyl boldine.*

Diacetyl boldine is an extract from the bark of the Chilean Boldo tree.

This powerful ingredient acts at the tyrosinase level, reducing and controlling melanin production.

It is also a powerful antioxidant that has anti-ageing and brightening effects.

#### *Lactic acid AHA.*

Exfoliating and hydrating.

#### *Vitamin E.*

Antioxidant properties.

### Actions

Depigmenting Serum reduces and controls melanin production, thus preventing and reducing hyper-pigmented spots.

The complexion becomes even and regains its youthful brightness.

## Use

### Skin Conditions

Skin with patches of over-pigmentation and age-spots

### Home Use

#### Morning and or Evening

Apply a very small quantity to over-pigmented spots only.

Must be followed with Lightening Cream.

### Salon Use

#### Step #4 of Skin Care Treatment

Apply Depigmenting Serum on pigmentation spots only.

Refer to Clarifying Treatment.
