

Four Forms of Hyaluronic Acid

1

OIL SOLUBLE LMW HYALURONIC ACID (Sodium Hyaluronate)

- First to market oil soluble Hyaluronic Acid
- Deeper penetration into the skin
- Instant & long-lasting hydration
- Holds water in the dermis
- When incorporated into an oil blend, it will provide moisture for a dry skin as well as hydration

2

CROSSLINKED HYALURONIC ACID (HMW)

- High water-binding capacity
- Free radical scavenger
- Forms a film on the skin to prevent dehydration
- Delivers water over time

3

ACETYLATED HYALURONIC ACID

Flash Filler Effect

- Needle-free
- Works in 1-6 hours

Derma-Cosmeceutical Effect

- Anti-ageing
- Anti-pollution
- Anti-oxidation

4

HYDROLYSED HYALURONIC ACID

Double Action Approach

- Stimulation of skin defences
- Provides cellular repair and wound healing
