

BIO NEEDLING

MICRO

SPONGILLA PEELS SET

For 1 treatment

Spongilla Peeling Powder: 2g x 1 piece

Solution Liquid: 10mL x 1 piece

11 million bio-needles per treatment

Spicule length: 300um

It is advised to do patch test or avoid on clients with untreated thyroid conditions

ALGAE-POWERED RENEWAL

This treatment is designed to actively encourage skin peeling using long-length spicules. These spicules are more abrasive, creating deeper stimulation and promoting visible exfoliation as the skin renews — revealing a smoother, fresher complexion beneath

Enriched with spirulina and chlorella, this antioxidant-rich blend hydrates, calms inflammation, and supports collagen for a smoother, healthier glow

IDEAL CLIENT

- Most exfoliating as the product has a long spicule with algae attached, this makes it the most abrasive, with mechanical exfoliation as well as spicule needling.
- For clients that are happy to experience heat and prickling during treatment.
- Peeling most likely and longer downtime of up to 10 days
- Results more extreme, as the skin can become hot, red and tight from day 2 with peeling from day 3.
- Ideal for acne breakout, inflamed acne and scarring.
- Increases peeling and removes pigment and melasma.
- Ideal on sun damaged skins that are looking for skin resurfacing.

KEY INGREDIENTS

- **Hydrolysed Sponge** - Aids skin regeneration & ingredient delivery
- **Spirulina powder** - anti ageing and anti inflammatory due to its high antioxidant effects
- **Chlorella vulgaris** - rich in essential nutrients, vitamins, minerals and antioxidants. Hydrates, reduces inflammation and stimulates collagen.
- **Collagen** - to plump the skin and minimise fine lines and wrinkles.

USAGE RECOMMENDATIONS

SALON USE

1. Cleanse skin well with a gentle cleanser such as Nimue Cleansing Gel.
 2. Sterilise the skin with a purifying lotion such as GERnetic Sebo Ger or Derma and pat dry.
 3. Empty Spongilla Peeling Powder into a small bowl. Open the Solution Liquid by removing the cap and foil seal. Empty the entire contents over the powder. Using a spatula, mix well. Please note, the peel will have a brown colour. This is due to the spicules being 45% pure along with the algae content.
 4. Apply to the forehead and cheeks with a spatula. The neck can be treated also, but note this area is more sensitive.
 5. Massage in circles and press/pull for 10 minutes. For thin or sensitive skin reduce operation time to 5 minutes.
 6. Be sure to press the product well into the skin. The skin can feel hot and tingly. This is normal.
 7. Using dampened fibrella and firm movements, remove the excess Spongilla Peel from the skin.
 8. To cool the skin, we suggest using an Alginate mask such as Nimue Alginate Mask. Mix well and apply over face, neck and eyes. Leave to act for 15 minutes. A sheet mask could be used if preferred alongside Ice Globe/Cryotherapy massage.
 9. Remove the mask. Wipe over the skin again with damp fibrella.
 10. Finish the treatment by applying a soothing, calming gel, such as Spongilla Tech Repair Gel or GERnetic's Calming Care Gel.
 11. Apply a hydrating cream such as Gernetic Synchro, if required.
- Clients are to follow the aftercare recommendation guide.
